EDUCATION

University of Waterloo

Expected: 2030

Bachelor of Computer Science (Honours Co-op)

Waterloo, ON

- **Relevant Coursework:** Programming Principles, Object Oriented Programming, Data Structures & Algorithms

EXPERIENCE

Software Engineer · Oro · Toronto, ON

Jul. 2026 – Present

- Built from 0-1 the FastAPI backend & infrastructure for an AI wardrobe assistant, reaching **2,000+ downloads**.
- Implemented **9 production features** powering onboarding, wardrobe clothing ingestion, and AI generated collage fits using PostgreSQL/pgvector for memory persistence.
- **Reduced hallucinations by 40%** by finetuning vision-language models (Gemini-3.1 & GPT-4.1) for wardrobe analysis, implementing schema validation and fail-safe inference pipelines.

Full Stack Developer · SproutHacks · Waterloo, ON

Dec. 2024 – Mar. 2025

- Developed the registration and event systems for **350+ live users** enabling attendees to register and organizers to manage event operations through a **React & Typescript** dashboard.
- Integrated organizer tooling for searching, filtering and updating attendee records, streamlining event operations for **100+ participants**.

Machine Learning Intern · STEMAway · Santa Clara, California

Jun. 2024 – Sept. 2024

- Generated a dataset for biological prediction tasks by integrating **1M+** protein-protein interaction data points from STRINGdb and target-disease association data from OpenTargets
- Trained & benchmarked **4 machine-learning models**: logistic regression, random forest, gradient boosting & SVM to provide a baseline for more advanced models.
- Achieved a **0.9916 test F1-score** using gradient boosting, along with a consistent cross-validation performance of **0.9914** tested against a 20% unseen test dataset.

PROJECTS

ClipRank | Ruby on Rails, Python, PostgreSQL, Whisper, OpenCV, Docker

- Built an end-to-end Rails and FastAPI application that transforms long-form MP4/MOV recordings into ranked, viral-worthy, 15–60 second clips using automated AI transcription, trends & historical posts.
- Scaled social reach on a personal Instagram account from **150K to 350K monthly views (+133%)** by building a custom recommendation engine that extracts 32 text, audio, and visual features to generate clip rankings.

VeloCity | Python (Scikit-learn, Pandas, NumPy), React, TypeScript, Vite

- Trained a random forest model in Python using **754** geospatial traffic observations, improving **prediction accuracy by 39%** for cycling demand, lowering MAE from **1.115 to 0.675**, against baseline models.
- Ranked **20** proposed bike lane proposals by the City of Toronto Government with a **0–100** priority scale using a transparent decision engine that combines ML & 9 safety, connectivity, equity, demand, and accessibility features.

SnapStream | FastAPI, AWS, Terraform, ECS Fargate, PostgreSQL, Valkey, S3

- Deployed a **social-feed backend** supporting user authentication, media uploads, post creations, and browsing popularity-based feeds.
- Implemented AWS architecture with **multiple FastAPI servers, PostgreSQL, and Redis caching**, keeping feeds available even when the cache goes offline by falling back to PostgreSQL.
- Retained media through **S3** storage buckets and load-tested the system at **2,219 requests/second** with **8.5 ms** median cached-read latency.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, HTML, CSS, SQL, C++

Frameworks/Libraries: React, React Native, Node.js, FastAPI, SQLAlchemy, Pytest, PostgreSQL, Redis, Ruby

Tools/Platforms: AWS, Terraform, Docker, GitHub Actions, CI/CD
