EDUCATION

University of Waterloo

Sept. 2026 – 2031

Bachelor of Computer Science (Co-op)

Waterloo, ON

- **Relevant Coursework:** Designing Functional Programs (CS 135), Elementary Algorithm Design (CS 136), Algebra (MATH 135), Calculus I (MATH 137)

EXPERIENCE

Founding Engineer

Aug. 2026 – Present

Oro

Toronto, ON

- Architected and shipped the FastAPI backend for an SMS-native AI stylist, using PostgreSQL/pgvector and Redis to support 2K+ downloads and 9+ production AI and multimodal features.
- Designed a privacy-first LLM memory layer for preference extraction, correction and forget requests, and context expiry, with optimistic versioning and idempotent webhook handling.
- Implemented consent-aware LLM onboarding with fail-closed logic and tool grounding to reduce hallucinations and prevent unsafe user flows.
- Engineered fault-tolerant photo ingestion and a branded collage renderer, coordinating Gemini, OpenAI, and Claude across the recommendation pipeline.

Senior Coding Instructor

Jun. 2025 - Aug. 2026

University of Toronto

Toronto, ON

- Designed and delivered Python, Scratch, and web-development workshops for 300+ students; built interactive teaching tools and curriculum.
- Deployed interactive teaching games that increased student participation by 40% and improved comprehension of complex logic structures.

Lead Software Engineer

Jun. 2024 – Sept. 2024

SproutHacks

Waterloo, ON

- Spearheaded the frontend and backend infrastructure for a hackathon registration portal and user dashboard using React, TypeScript, and Tailwind CSS. Used Supabase for user storage.
- Integrated REST APIs and Firebase authentication to support real-time data syncing and onboarding for 100+ active participants.

PROJECTS

drawOff | *React, TypeScript, Tailwind CSS, Node.js, Socket.io*

May 2026 – Present

- Built a real-time multiplayer drawing game with Socket.io and server-authoritative game-state management, maintaining sub-second player synchronization.
- Implemented a hybrid judging system where AI vision-model scoring runs by default, with live spectator votes overriding as the winner determinant when present.
- Built matchmaking and room/game-state management handling turn sequencing, round progression, and win conditions across concurrent sessions.

Voca (MathHacks) | *React, TypeScript, Tone.js, MediaPipe*

Feb. 2026

- Engineered a real-time vocal processor and pitch-training platform to train pitch/singing.
- Integrated MediaPipe computer vision for live hand-tracking and autocorrelation algorithms to modulate audio effects and provide gamified pitch feedback.
- Built and deployed CI/CD pipelines; placed top 4 of 60 hackathon projects.

TECHNICAL SKILLS

Languages: Typescript/Javascript, HTML/CSS, Python, Lua, C++

Frameworks/Libraries: React/React Native, Node.js, SQL/PostgreSQL, Redis, Firebase, Supabase

Tools/Platforms: Git/GitHub Actions, CI/CD
